- Angular
- Bootstrap
- Express

Library

- Nodejs

Storage

- MongoDB

Languages

Spanish (Native)

English

Enthusiastic and proactive. I am fascinated by the web development and all related to IT. I have gained experience as a web developer building website for small businesses located in my country and working in my personal startup celularesnica.com, a web platform for buying and selling smartphones. I am exited to learn other languages and expand my knowledge as a web developer. I would offer all my commitment and be a pleasant addition to your team.

Projects

2020
- **celularesnica.com:** A web platform for buying and selling smartphones. The platform allows local business to create an online store and publish ads through a catalogue of what they are offering to their clients. I developed the entire website with the MEAN stack and hosted the project in Digital Ocean in a VPS using Ubuntu OS.

2019
- **grekoostudio.com**: Designed and developed a landing page full responsive for a small business of publicity and advice in the process of getting a domain name and setting it up.

Experience

- Designed and developed entire websites for local business.
- Maintained and updated the websites using git and GitHub as version control tool.
- Implemented Angular Universal to improve the search engine optimization of my startup.
- Deployed the project to production in a VPS on Digital Ocean using Ubuntu OS.
- Installed SSL certificate with Let's Encrypt.
- Programmed an API REST with Nodejs, Express and mongoose to handle queries to a database designed in MongoDB.
- Developed a client with Angular using the MDBootstrap (material design for bootstrap) Pro Angular version.

Education

Computer engineering 2014 - 2019

National University of Engineering
UNI - Managua, Nicaragua
